

Testimonials *

« Since I use Extraim the **calves are very healthy** and I have **less problems of cryptosporidiose and lungworts**, what allowed us to **save expenses** vet. I start the calves in individual compartments with bucket with pacifier and then with milk automatic dispenser. The product passes very well. » GAEC Bouvanterie in Le Pas (53)

« I use Extraim for 3 years of the birth until the weaning. I made the comparative test and I saw calves who are **more tonic**, who **less fall ill** and are **faster cured**. The product is **appétant** and mixes well, I make the preparation for all the male calves and female» GAEC Grande Maison in Louvigné du désert (35)

«Since we use EXTRA IM, that calmed well to us the problems of diarrheas: we make no more drip for the calves. We notice a **better state of the calves (hair and appetite)** and an **easier food transition** for the weaned heifers. It is necessary to start at once in the birth for step to have no problem» GAEC du Champ du Bois (01)

« I use the product since 2010, there is not a diarrhea anymore and the **calves are more resistant**. In summary, "it's great !": the calves are **great tonic** and all the males are sold fast with no problem at all.» EARL du Pont Besnard in Saint Dénoual (22)

Solution for young animals

Extra-im

For having healthy animals !

www.evimax.fr

Invest on the future

Make a **more beautiful heifer** and **secure the milky phase**

Prevent rather than cure: used in systematic prevention EXTRA IM promotes the early growth (**well start**) of calves and the **optimum development** of heifers, on which the future productivity of the exploitation.

+ Having healthy calves, i.e.:

- energetics
- with **more appetite**
- beautiful coat
- which **eats earlier and more** solid feed
- with **improved growth**
- **less sick** (including less diarrhea)
- better care efficiency = **faster healthing**

it is the testimony of farmers giving EXTRA IM to young calves !

EXTRA-IM is a complementary feed rich in a **mixed specific natural Polyphenols** (important antioxidant power) which help to favourably influence intestinal flora of animals and is condition of proper functioning of the immune system.

Economic and effective

EXTRA-IM aims at **improving the general state** of the animal and at making an **in great shape young animal** (beautiful heifer, beautiful roe deer).

When and how to use EXTRA IM

Add and mix EXTRA-IM in milk or feed substitution **from birth and every day until weaning.**

Recommended quantity : 10 g / day / calve (= 1 pad-spoon / day / calve) (or 1g / day / lamb or kid).

In case of problems, **double the amount** for 3 to 5 days if necessary.

Useful and effective to double the amount as **prevention before and during** feed transition and **periods of stress:** transport, climate change, health problems, etc...

EXTRA-IM is efficient on caprine and ovine : kids, roe deers and goats.

Very profitable test : be made your own opinion : with 1 bucket, compare 2 groups during 2 months :

6 calves **WITH** EXTRA-IM

6 calves **WITHOUT** EXTRA-IM

Objective: increase the number of liter of milk during life :

Average in France: 13 to 14 litres (2,8 lactations)

Improvement if :

- Earlier calving (+3kg/day)
- Better production of the cow
- Larger number of lactations
